Program Aims of computer science

Based on the vision and mission of the program, the Computer Science program aims to prepare specialized and distinguished graduates in the field of computer science in the following areas:

1-The program focuses on preparing and qualifying specialists to meet the demands of both public and private sectors in the field of computer science. This is achieved through diversifying learning and teaching methods and training students to apply the knowledge and skills acquired to solve real-world problems.

2-The program aims to create a conducive environment for students, enabling them to apply their acquired knowledge and skills in understanding the needs and social issues related to computer science within the community

3-Providing outstanding academic programs in the field of computer science, encompassing both theoretical and applied aspects, in line with international standards for academic quality and meeting the needs of the job market

4-The program aims to encourage and foster scientific research in the field of computer science, promoting exploration and advancements in various areas

5-The program strives to establish a motivating environment for faculty members, facilitating the enhancement of their knowledge and educational and research skills

6-Additionally, the program focuses on building and enhancing partnerships with government, private sectors, and the community across various institutions. This collaboration aims to create synergies and contribute to the overall development of the field

7-The program focuses on arranging seminars and hosting scientific conferences in the field of computer science and information technology. The objective is to deepen conceptual understanding and elevate the academic standards among specialized professionals
