

اللائحة الداخلية
لدرجة ماجستير العلوم الهندسية
تخصص "هندسة الميكاترونيات"

المحتويات

الصفحة	البند	
3	<u>أحكام عامة</u>	أولاً:
3	مادة (١) تعريف بالدرجة	
3	مادة (٢) الأقسام العلمية المشاركة	
3	مادة (٣) المجلس العلمي	
4	مادة (٤) المنح	
4	مادة (٥) نظام الدراسة	
4	مادة (٦) الارشاد الأكاديمي والإشراف	
4	مادة (٧) دلجة الماجستير المزدوجة	
5	مادة (٨) التحويل	
6	<u>الأحكام المنظمة للدراسة و الحصول على الدرجة</u>	ثانياً:
6	مادة (٩) المتطلبات	
6	مادة (١٠) رسوم الدراسة	
6	مادة (١١) اختيار المقررات	
6	مادة (١٢) مدة الدراسة	
7	مادة (١٣) توقيتات الدراسة	
7	مادة (١٤) فئات وتوقيتات القيد و التسجيل	
8	مادة (١٥) تسجيل المقررات و الرسالة	
8	مادة (١٦) الحذف و الإضافة والإسحاب	
9	مادة (١٧) الحرمان من دخول الامتحان النهائي	
9	مادة (١٨) الاعتذار عن عدم دخول الامتحان النهائي	
9	مادة (١٩) التوقف عن الدراسة	
9	مادة (٢٠) إعادة القيد	
9	مادة (٢١) احتساب ساعات معتمدة من خارج الكلية	
10	مادة (٢٢) النقاط و المتوسطات والتقدير	
11	مادة (٢٣) الحكم والمناقشة	
13	<u>أحكام التطبيق</u>	ثالثاً:
13	مادة (٢٤) تطبيق اللائحة بعد صدورها	
13	مادة (٢٥) في شأن ما لم له نص في اللائحة	
14	<u>الملاحق (جداول و توصيف المقررات و المحتوى العلمي)</u>	رابعاً:

اللائحة الداخلية للبرنامج الجديد لدرجة ماجستير العلوم الهندسية**فى تخصص هندسة الميكاترونيات****أولاً: أحكام عامة****مادة (١): تعريف بالدرجة:**

تمنح درجة الماجستير في العلوم الهندسية تخصص هندسة الميكاترونيات في اطار مرحلة الدراسات العليا للبرامج الجديدة بكلية الهندسة جامعة الزقازيق كدرجة ممهدة للحصول على درجة دكتوراه الفلسفة في ذات التخصص أو أي تخصص اخر مناسب وفقا لما تحدده اللائحة المنظمة لذلك.

و درجة الماجستير هنا هي درجة بينية (Inter-disciplinary) يشارك فيها أكثر من قسم علمي.

مادة (٢): الأقسام العلمية المشاركة :

تشارك الأقسام العلمية الآتية بشكل رئيس في تدريس المقررات و في الارشاد الأكاديمي لطلاب درجة الماجستير في هندسة الميكاترونيات:

(أ) قسم هندسة القوى الميكانيكية.

(ب) قسم هندسة التصميم الميكانيكي و الانتاج.

(ج) قسم هندسة الالكترونيات و الاتصالات الكهربائية.

(د) قسم هندسة القوى و الآلات الكهربائية.

(هـ) قسم هندسة الحاسبات و المنظومات

و تشارك كل هذه الأقسام أو بعضها في الاشراف على الرسالة.

مادة (٣) : المجلس العلمي

يشكل مجلس علمي لإدارة برنامج درجة ماجستير هندسة الميكاترونيات من رؤساء مجالس الأقسام المشاركة المبينة في المادة (٢) ، ويجوز ضم أستاذ أو أكثر من ذوي الخبرة الي هذا المجلس ويكون رئيسه هو اقدم الأعضاء ، ويحدد مجلس الكلية مهامه.

ماده (٤) : المنح

تمنح جامعه الزقازيق بناءا على طلب مجلس كلية الهندسة درجة الماجستير فى العلوم الهندسيه "تخصص هندسه الميكاترونيات".
وينص فى شهاده الحصول على الدرجه على عنوان الرساله و على مسمى الأقسام العلميه المشاركه فى الاشراف عليها.

ماده (٥) : نظام الدراسه

الدراسه لدرجة الماجستير فى تخصص "هندسه الميكاترونيات" تكون بنظام الساعات المعتمده .
ويقصد بالساعه المعتمده ساعه محاضره واحده أو ساعتين من التمارين النظرية أو العملية اسبوعيا.

ماده (٦) : الارشاد الأكاديمى و الاشراف:

(أ) يعين لكل مجموعه من الطلاب مرشد أكاديمي من بين أعضاء هيئة التدريس في الأقسام المبينة في المادة (٢)، و تكون مهمته معاونه الطالب في التسجيل و اختيار المقررات وفي حل اية مشكلات تقابله خلال الدراسه.

(ب) يعين مجلس الكلية بتوصية من المجلس العلمي للبرنامج مشرفا أو أكثر على رساله الطالب من بين أعضاء هيئة التدريس من الأساتذة (أو الأساتذة المساعدين) بالأقسام المختصة بموضوع الرساله.

ماده (٧): درجة الماجستير المزدوجة (Dual Degree)

يجوز للطلاب الحصول على درجة ماجستير مزدوجة في هندسة الميكاترونيات ، وعليه في هذه الحالة قضاء فصل دراسي كامل أو أكثر (مقررات أو رساله أو كلاهما) في الجامعة الأجنبية الموقعة على الاتفاقية الخاصة بذلك .

ويحدد عدد الساعات المعتمدة هنا وفقا للنظام المتبع في الجامعة الأجنبية، وتحتسب ضمن الساعات المطلوبة للحصول علي الدرجة ، مع مراعاة حكم المادة (٩) من هذه اللائحة .

ماده (٨) : التحويل

يجوز للطالب المقيد لدرجة ماجستير الهندسة في تخصص معين التحويل الى القيد لدرجة ماجستير العلوم الهندسية (تخصص هندسة الميكاترونيات) أو العكس بموافقة الأقسام العلمية المختصة والمجلس العلمي للبرنامج (المادة (٣))، مع مراعاة حكم المادة (١٢) من هذه اللائحة، وعمل المقاصة اللازمة في هذه الحالة.

ثانيا: الأحكام المنظمة للدراسة

ماده (٩) : المتطلبات

يتطلب الحصول على درجة الماجستير فى العلوم الهندسيه (تخصص الميكاترونيات) مايلى :

- دراسة عدد من المقررات من مستوى (٥٠٠) باجمالى (٣٠) ساعات معتمده والنجاح فيها مع تحقيق تقدير تراكمى فيها لا يقل عن (C).

- اجراء بحث علمى تطبيقى واعداد رساله عنه تجيزها لجنة الحكم والمناقشه بتقدير B على الأقل وتكافىء الرساله ١٥ ساعات معتمده، و توزع الساعات المعتمده الاجمالية على الفصول الدراسية و فقا للماده (١٢).

ماده (١٠) : رسوم الدراسه :

(أ) يسدد الطالب الرسوم الدراسية العادية أو رسوم التسجيل المتأخر حسب عدد الساعات المعتمده المسجل لها بالاضافه الى الرسوم الأخرى التي قد تقررها الجامعة.

(ب) تقرر الجامعة سنويا الرسوم الدراسية العادية و رسوم التسجيل المتأخر عن الساعه المعتمده الواحدة وكذلك الرسوم الاضافية . و تحدد أيضا الحد الأدنى لرسوم الدراسة.

ماده (١١) : اختيار المقررات:

يقوم الطالب المتقدم بالتسجيل في فصل دراسي معين بالاختيار من بين مقررات مطروحة في الجداول الملحقه بهذه اللائحة بحد أدنى ٢ مقرر (٦ ساعات اسبوعيا) وحد أقصى ٥ مقررات (١٥ ساعة اسبوعيا) وبالاستعانة بالمرشد الأكاديمي في تحديد المقررات المناسبه للطالب .

ماده (١٢) : مدة الدراسة

(أ) مدة الدراسه لدرجة الماجستير فى تخصص هندسة الميكاترونيات سنتان أكاديميتان على الأقل من تاريخ القيد (شاملا دراسة المقررات و اجراء البحث و اعداد الرسالة) علي النحو التالي :

- السنة الأولى من فصلين دراسيين (S_1, S_2) بكل فصل ١٢ ساعات معتمده دراسيه ، ويجوز طرح فصل صيفى اذا لزم الأمر .

- السنة الثانية (S_3, S_4) يخصص الفصل الأول لدراسة ٦ ساعات معتمدة (عدد ٢) مقررات دراسية و ٥ ساعات معتمدة للجزء الأول للرسالة و الفصل الثاني للبحث و الرسالة بما يكافئ ١٠ ساعات معتمدة (اجمالي ٤٥ ساعة معتمدة).

(ب) الحد الأقصى لمدة الدراسة لدرجة الماجستير هو خمس سنوات أكاديمية.

(ج) يجوز مد الحد الأقصى المنصوص عليه في الفقرة (ب) بناء على تقرير من لجنة الاشراف على الرسالة وموافقة المجلس العلمي للبرنامج و مجلس الكلية، و بحد أقصى ستة سنوات.

ماده (١٣) : توقيات الدراسة

تقسم السنة الأكاديمية الى ثلاث فصول دراسية على النحو التالي:

(أ) الفصل الدراسي الأول (فصل الخريف (Autumn Term)): و يبدأ من السبت الثالث من شهر سبتمبر و تستمر لستة عشر اسبوعا.

(ب) الفصل الدراسي الثاني (فصل الربيع (Spring Term)): و يبدأ السبت الثاني من شهر فبراير ويستمر لستة عشر اسبوعا.

(ج) الفترة الصيفية (Summer Term) : و تبدأ من السبت الثالث من شهر يونيو و يستمر لثمانية أسابيع ، و يطرح الفصل الصيفي في اطار الضرورة و مصلحة الطالب. وفي الفترة الصيفية يضاعف عدد الساعات الفعلية للمقرر.

ماده (١٤) : فئات وتوقيات القيد والتسجيل :

(أ) يجوز القيد والتسجيل لدرجة الماجستير فى هندسة الميكاترونيات لل حاصلين على درجة بكالوريوس الهندسة فى تخصص هندسة الميكاترونيات أو أحد تخصصات الهندسة الميكانيكية أو الهندسة الكهربيه من إحدى الجامعات أو المعاهد المصريه أو مايعادلها و المعترف بها من المجلس الأعلى للجامعات بتقدير تراكمى جيد أو (C+) على الأقل بنظام الساعات المعتمدة.

(ب) يتم الاعلان عن فتح باب القيد لأي فصل دراسي (Semester) في الفترات الزمنية المختلفة قبل ستة أسابيع من بدء الفترة الزمنية التي سوف يدرس بها الطالب و تقدم طلبات الالتحاق لإدارة البرنامج و لمدة خمسة أسابيع و طبقا للمادة (١٣).

(ج) يتم القيد و التسجيل لأي مرحلة دراسية قبل اسبوعين من بدء أي فترة زمنية و بعد سداد الرسوم المقررة.

ماده (١٥) : تسجيل المقررات و الرسالة:**(أ) المقررات:**

يكون التسجيل للمقررات الدراسية خلال الاسبوع الأول من الفترة الدراسية و لعدد ساعات معتمدة وفقا للمادتين (١١) ، (١٢) و بموافقة المرشد الأكاديمي. و لا يعد التسجيل نافذا الا اذا سدد الطالب الرسوم الدراسية المقررة.

الجزء الأول يشمل دراسة الطالب لمقررات تعادل ٣٠ ساعات معتمدة و يمكن أن تسجل على عدد من الفصول الدراسية بحد أدنى ٦ ساعات للفصل الدراسي العادي و بحد أقصى ١٢ ساعة معتمدة. و يجوز أن يسجل حد أدنى ٣ ساعات و حد أقصى ٦ ساعات للفصل الدراسي الصيفي.

(ب) الرسالة:

الجزء الثاني: ويشمل اعداد الرسالة و التي تعادل ١٥ ساعة معتمدة مقسمة على جزئين (٥، ١٠) ساعات معتمدة. و لا يكون تسجيل الرسالة نافذا الا اذا سدد الطالب الرسوم الدراسية عن ذلك ، و يحدد في استمارة التسجيل موضوع الرسالة بموافقة المجلس العلمي للبرنامج و اعتماد مجلس الكلية.

(ج) التسجيل المتأخر:

يجوز عند الضرورة السماح للطالب بالتسجيل في المقررات أو الرسالة بعد انتهاء الوقت الرسمي الوارد من فقرة (أ) من هذه المادة و لظروف اضطرارية، و لا تزيد مدة التسجيل المتأخر عن يومين بعد انتهاء الوقت الرسمي مباشرة. و يسدد الطالب رسوما اضافية وفقا للمادة (١٠) مقابل السماح له بالتسجيل متأخرا.

مادة (١٦) الحذف و الاضافة والانسحاب

أ يحق للطالب بموافقة المرشد الأكاديمي، حذف أو اضافة، مقرر أو أكثر خلال أسبوعين من بدء الدراسة مع مراعاة الحدين الأدنى والأقصى لساعات التسجيل و ذلك بموافقة المرشد الأكاديمي، و ترحل رسوم المقرر المحذوف الى مقرر مضاف في حالة حذف مقرر في مقابل اخر مضاف.

ب للطالب الحق في الانسحاب من المقرر أو الفصل الدراسي بالكامل خلال ثمانية أسابيع على الأكثر من بداية الدراسة في أي فترة زمنية و لا ترد له الرسوم الدراسية في هذه الحالة . ويكون الانسحاب بطلب يقدم من الطالب وموقع عليه من المرشد الأكاديمي.

ج للطلاب الحق بموافقة المرشد الأكاديمي في إعادة التسجيل (دراسة وامتحان) في أي مقرر رسب فيه أو يرغب تحسين تقديره مع سداد رسوم المقرر، مع مراعاة المتطلب السابق (ان وجد).

مادة (١٧) الحرمان من دخول الامتحان النهائي

يحرم الطالب من دخول الامتحان النهائي للمقرر اذا قلت نسبة حضوره فيه عن ٧٥% من إجمالي الساعات الفعلية على أن يتم إنذار الطالب عند بلوغ نسبة غيابه ١٥%. ويكون ذلك بناء على تقرير من أستاذ المادة مع موافقة المجلس العلمي للبرنامج و اعتماد مجلس الكلية وفي هذه الحالة يعتبر الطالب راسبا في المقرر (تقدير F).

مادة (١٨) الاعتذار عن عدم دخول الامتحان النهائي

يجوز للمجلس العلمي للبرنامج قبول اعتذار الطالب عن عدم دخول امتحان أحد المقررات إذا تقدم بطلبه قبل بدء الامتحان أو خلال ٤٨ ساعة من تاريخ الامتحان مدعما بمبرر مقبول. وفي حالة عدم تقديم عذر أو تقديم عذر غير مقبول يعتبر الطالب راسبا في المقرر (تقدير F).

مادة (١٩) التوقف عن الدراسة

لا يحق للطالب أن يتوقف عن الدراسة (القيد و التسجيل) لأي مرحلة دراسية (مقررات أو رسالة) لأكثر من أربعة فترات زمنية متتالية وإلا يعتبر قيده لاغيا.

مادة (٢٠) إعادة القيد

إذا تم إلغاء قيد الطالب لأي سبب يجوز إعادة قيده بناء على اقتراح المجلس العلمي للبرنامج و موافقة مجلس الكلية. ويجوز أن يعفى الطالب المعاد قيده من المقررات التي يكون سبق له دراستها قبل إلغاء القيد و لم يمض على نجاحه فيها أكثر من خمس سنوات اكاديمية، وذلك بناء على طلب من المجلس العلمي للبرنامج و موافقة المجلس العلمي للبرنامج و اعتماد مجلس الكلية.

مادة (٢١) احتساب ساعات معتمدة من خارج الكلية

يجوز لمجلس الكلية و بناء على اقتراح من المجلس العلمي للبرنامج و مجلس القسم المختص احتساب ساعات معتمدة مقابلة لمقررات على مستوى الدراسات العليا يكون سبق للطالب دراستها و النجاح في نفس التخصص في أي كلية أو معهد علمي آخر معترف به من المجلس الأعلى للجامعات ما لم يمض

على نجاحه فيها أكثر من خمس سنوات على ألا يكون قد حصل من خلالها على درجة علمية و لا يقل تقديره فيها عن (C+) أو (٧٥%).

مادة (٢٢) النقاط و المتوسطات و التقديرات

أ - تحسب تقديرات المقررات على اجمالي درجات اعمال الفصل والعملية (ان وجد) بحد اقصى 30 % ودرجات الامتحان النهائي (التحريري أو العملية) بحد ادنى ٧٠ % .

ب - تحدد النقاط المقابلة لكل ساعة معتمدة من الجدول رقم (١) التالي:

جدول (١)

النسبة المئوية لدرجة الطالب الاجمالية في المقرر	تقدير المقرر	عدد النقاط لكل ساعة معتمدة
من 90 فأكثر	A	أ
من 88 الى اقل من 90	A ⁻	أ ⁻
من 85 الى اقل من 88	B ⁺	ب ⁺
من 80 الى اقل من 85	B	ب
من 78 الى اقل من 80	B ⁻	ب ⁻
من 75 الى اقل من 78	C ⁺	ج ⁺
من 70 الى اقل من 75	C	ج
من 68 الى اقل من 70	C ⁻	ج ⁻
من 65 الى اقل من 68	D ⁺	د ⁺
من 60 الى اقل من 65	D	د
أقل من 60 (راسب)	F	هـ

(ج) متوسط النقاط:

- تحسب نقاط كل مقرر على أنها عدد ساعاته المعتمدة مضروبا في نقاط كل ساعة من الجدول السابق.

- يحسب مجموع النقاط للطالب في أي فصل دراسي على أنه مجموع نقاط المقررات التي درسها في الفصل.
- يحسب متوسط نقاط أي فصل دراسي (SPA) على أنه ناتج قسمة مجموع نقاط الفصل مقسوما على مجموع الساعات المعتمدة للمقررات التي درسها الطالب في هذا الفصل ويحدد و تقديره في الفصل من الجدول رقم (٢).
- المقرر الذي يحصل فيه الطالب على تقدير اقل من C يتم اعتباره في حساب متوسط النقاط الفصلي ولا يعتد به ضمن الساعات المعتمدة المقررة في المرحلة إلا إذا أعاده ونجح فيه بتقدير C أو أعلى فتحسب له الأخيرة فقط .
- يحسب المتوسط التراكمي للنقاط (GPA) أو (CPA) من مجموع نقاط الطالب في الفصل أو الفصول السابقة عليه مقسوما على مجموع الساعات المعتمدة التي اجتازها الطالب في الفصل و الفصول السابقة عليه ويحدد التقدير التراكمي من الجدول رقم (٢).
- المقرر الذي يقوم الطالب بتحسين تقديره و نقاطه فيه، يتم اسقاط تقديره و نقاطه قبل التحسين من حساب متوسط النقاط (سواء الفصلي أو التراكمي) مهما كان عدد مرات التحسين.

مادة (٢٣) الحكم والمناقشة:

تتخذ اجراءات الحكم والمناقشة لرسالة الماجستير في تخصص هندسة الميكاترونيات وفقا للنصوص الواردة في قانون تنظيم الجامعات المصرية و قرارات المجلس الأعلى للجامعات في هذا الشأن. ويجوز في حالة الدرجة المزدوجة أن يشارك عضو هيئة تدريس من الجامعة الأجنبية الموقعة على الاتفاقية وبلجنة الحكم والمناقشة، و يحال تقرير لجنة الحكم والمناقشة الى المجلس العلمي للبرنامج، و يرفع التقرير النهائي الى مجلس الكلية للاعتماد.

جدول (٢)

متوسط النقاط (الفصلي أو التراكمي)	التقدير		(الفصلي أو التراكمي)
ممتاز ⁺	أ ⁺	A ⁺	من ٣,٨ الى ٤,٠
ممتاز	أ	A	من ٣,٦ الى أقل من ٣,٨
ممتاز ⁻	أ ⁻	A ⁻	من ٣,٤ الى أقل من ٣,٦
جيد جدا ⁺	ب ⁺	B ⁺	من ٣,٢ الى ٣,٤
جيد جدا	ب	B	من ٣,٠ الى أقل من ٣,٢
جيد جدا ⁻	ب ⁻	B ⁻	من ٢,٨ الى أقل من ٣,٠
جيد ⁺	ج ⁺	C ⁺	من ٢,٧ الى ٢,٨
جيد	ج	C	من ٢,٦ الى أقل من ٢,٧
جيد ⁻	ج ⁻	C ⁻	من ٢,٥ الى أقل من ٢,٦
مقبول ⁺	د ⁺	D ⁺	من ٢,٤ الى ٢,٥
مقبول	د	D	من ٢,٣ الى أقل من ٢,٤
مقبول ⁻	د ⁻	D ⁻	من ٢,٠ الى أقل من ٢,٣
راسب	هـ	F	أقل من ٢,٠

ثالثا: أحكام التطبيق:

مادة (٢٤) تطبيق اللائحة بعد صدورها:

يبدأ تطبيق هذه اللائحة وملاحقتها على الطلاب المقبولين بها من بداية العام الدراسي التالي مباشرة لصدور القرار الوزاري الخاص بها، مع مراعاة أحكام المادتين (١٤)، (١٥)

مادة (٢٥) في شأن ما لم يرد له نص في اللائحة:

تطبق فيما لم يرد بشأنه نص في هذه اللائحة أحكام القانون (٤٩) لتنظيم الجامعات المصرية و لائحته التنفيذية القوانين المعدلة لهما و كذلك القرارات الوزارية المبينة على قرارات صادرة من المجلس الأعلى للجامعات.

Cources syllabus and curriculum

Advanced Engineering Mathematics					
Identification number MM11	Workload 180 h	Credits 6 ECTS 3 CH	Semester 1	Frequency of offer Winter semester	Duration 1 Semester
1	Courses Course instruction: 2 HPW Exercise: 2 HPW		Contact time 4 HPW / 60 h	Self-study 120 h	Planned group size 20 students
2	Course Description Build on the undergraduate students' math knowledge in order to provide the necessary skills in analytical and computational mathematical methods to work in a scientific environment and solve engineering problems in research and development projects.				
3	Learning outcomes / competencies On completing the course, students will be able to have to following skills: <ul style="list-style-type: none"> ▫ Knowledge and understanding <ul style="list-style-type: none"> A1. Understand analytical and computational principles in advanced mathematical methods. A2. Identify different transformations methods for the solution of advanced problems. ▫ Intellectual skills <ul style="list-style-type: none"> B1. Formulate strategies for solutions to advanced engineering problems based on the methods taught B2. Select mathematical tools appropriate for advanced engineering problems ▫ Professional and practical skills <ul style="list-style-type: none"> C1. Apply advanced mathematical methods for solving engineering problems. C2. Recognize the advantages / disadvantages of different computational solutions and select appropriate algorithms and software accordingly ▫ General and transferrable skills <ul style="list-style-type: none"> D1. Use a structured approach to advanced quantitative engineering problems. D2. Communicate solutions adequately 				
4	Contents <ul style="list-style-type: none"> ▫ Analytical Methods: Real and complex analysis; Partial differential equations, Fourier Transforms; Laplace transforms; Difference equations; Z-Transforms; advanced matrix operations and manipulations Computational Methods: Computer arithmetic; Numerical solutions of nonlinear equations and systems; Numerical solutions using least squares methods; Optimization theory.				
5	Teaching Method Lectures, tutorials, problem solving, modeling, and self-studies.				
6	Requirements Bachelor degree (BSc, BEng) in Engineering				
7	Examination Written in-class exams; Take-home exams				
8	Requirements for awarding credit points Module examination				
9	Significance of the mark for the final score 70%				
10	Representative module and full-time teachers Name of module coordinator at offering institution				

11	Other Information Books <ul style="list-style-type: none">□ K. A. Stroud, <i>Advanced Engineering Mathematics</i>, Industrial Press, 2011□ S. Advanced programming					
Identification number MM12	Workload 180 h	Credits 6 ECTS 3 CH	Semester 1	Frequency of offer Winter semester	Duration 1 Semester
1	Courses Course instruction: 2 HPW Exercise: 2 HPW		Contact time 4 HPW / 60 h	Self-study 120 h	Planned group size 20 students
2	Course Description Motivate Students' knowledge of Object Oriented Concepts (OOP). Teaching the knowledge and skills needed to develop reusable, quality programs. Using OOP to design and implement complex and real-time systems and to increase their proficiency in programming using available software Packages.				
3	Learning outcomes / competencies On completing the course, students will be able to have the following skills: <ul style="list-style-type: none"> □ Knowledge and understanding <ul style="list-style-type: none"> A1. Tell the principles of Object Oriented paradigms (OOP). A2. Use of knowledge of OOP to design and implement complex and real-time systems. □ Intellectual skills <ul style="list-style-type: none"> B1. Formulate and model designs for solutions to advanced engineering problems based on the methods taught B2. Choose modeling and programming tools appropriate to solve complex systems. □ Professional and practical skills <ul style="list-style-type: none"> C1. Apply OOP methods in control and mechatronic systems. in engineering problems. C2. Create and model complex problems by using appropriate tools. □ General and transferrable skills <ul style="list-style-type: none"> D1. Get hand-on experience in OOP method of thinking. D2. Communicate solutions adequately 				
4	Contents Analytical Methods: Object-Oriented Paradigm (Static, Dynamic). Parallel, Distributed Systems. Introduction to Database System. Practical Methods: The use of OOP to analyze, design, and implement complex systems. Choose an application example to evaluate its performance. The use of Unified Modeling Language (UML) as a tool for designing and implementing the control and mechatronic systems. Application using available software (LABVIEW, MATLAB, or any OO-Language such as Java).				
5	Teaching Method Lectures, tutorials, problem solving, modeling, self-studies.				
6	Requirements Bachelor degree (BSc, BEng) in Electrical Engineering, Mechanical Engineering or Computer Science				
7	Examination written examination				
8	Requirements for awarding credit points Module examination				
9	Significance of the mark for the final score 70%				
10	Representative module and full-time teachers

Industrial Mechatronics and Robotic Systems					
Identification number MM13	Workload 180 h	Credits 6 ECTS 3 CH	Semester 1	Frequency of offer Winter semester	Duration 1 Semester
1	Courses Course instruction: 2 HPW Exercise: 2 HPW		Contact time 4 HPW / 60 h	Self-study 120 h	Planned group size 20 students
2	Course Description: The main objectives of this course are to introduce: <ol style="list-style-type: none"> 1. The different automation systems used in modern industry and the use of robots in soft automation ones. 2. The fundamental transformation techniques from different frames of reference and kinematic analysis of robots. 3. Robot dynamics. 4. Machine vision. 				
3	Learning outcomes / competencies On completing the course, students will be able to have the following skills: <ul style="list-style-type: none"> ▫ Knowledge and understanding <ol style="list-style-type: none"> A1. Classify the different industrial automation types. A2. Classify the different types of robots. A3. Derive the transformation matrices between different frames of references. A4. Formulate the forward and inverse kinematics problems. A5. Clarify the machine vision concepts. ▫ Intellectual skills <ol style="list-style-type: none"> B1. Analyze robots motion. B2. Use inverse kinematics to calculate the inputs for the actuators. B3. Design of the robots links considering the static and dynamic analysis. ▫ Professional and practical skills <ol style="list-style-type: none"> C1. Apply robot programming for robots to achieve a given task. C2. Create robots models for design and analysis. C3. Apply machine vision technology for robot control. ▫ General and transferrable skills <ol style="list-style-type: none"> D1. Use information Technology for design and analysis. D2. Communicate solutions adequately D3. Lifelong self-learning. 				
4	Contents: Automation and robots- Robot classifications- Robot applications in Manufacturing - Performance specification and robot selection criteria - Fundamental theory and practical applications of robotic manipulators and mobile robots – Forward kinematics – Inverse kinematics- Work space analysis and trajectory planning -Equations of motion- Robot dynamics and statics - Motion planning - introduction to machine vision- basics of robot programming.).				
5	Teaching Method Lectures, tutorials, problem solving, modelling, self-studies.				
6	Requirements Bachelor degree (BSc, BEng) in Electrical Engineering, Mechanical Engineering or Computer Science				
7	Examination				

	written examination
8	Requirements for awarding credit points Module examination
9	Significance of the mark for the final score 70%
10	Representative module and full-time teachers

Mechatronics Systems Modeling and Simulation					
Identification number MM14	Workload 180 h	Credits 6 ECTS 3CH	Semester 1	Frequency of offer Winter semester	Duration 1 Semester
1	Courses Course instruction: 2 HPW Exercise: 2 HPW		Contact time 4 hpw / 60 h	Self-study 120 h	Planned group size 20 students
2	Course Description This course covers three main areas: modelling, simulation, and identification. It presents several modelling methodologies that can be used for mechatronics systems. This will cover mathematical and graph models. Software tools, such as MATLAB/Simulink and/or LABVIEW, will be used to simulate the systems and analyze the responses. Also, an introduction to system identification will be provided				
3	Learning outcomes) / competencies On completing the course, students will acquire the following skills: <ul style="list-style-type: none"> ▫ Knowledge and understanding <ul style="list-style-type: none"> A1. Recognize modelling and identification concepts as related to mechatronics systems A2. Understand simulation tools and results' analysis ▫ Intellectual skills <ul style="list-style-type: none"> B1 Comprehend complex models B2. Recognize patterns among different systems ▫ Professional and practical skills <ul style="list-style-type: none"> C1. Simulate industrial systems using software packages C2. Identify dynamic physical systems ▫ General and transferrable skills <ul style="list-style-type: none"> D1. Apply modelling and simulation techniques to engineering system design D2. Optimize system performance 				
4	Contents Modeling and Simulation Principles; System Analogies (mechanical, electrical, fluid and heat elements); Block Diagram Models and Transfer Functions; State Space Models; Model Linearization, Linear Graphs, Modeling of Electrical, Mechanical Systems, and Mechatronics Systems; System Response and Simulation, Model verification and validation; System Identification (parametric vs. nonparametric methods)				
5	Teaching Method Lectures, presentations and movies, discussions, tutorials, problem solving, projects, self study.				
6	Requirements Undergraduate courses in Control and engineering mathematics.				
7	Examination written examination				
8	Requirements for awarding credit points Module examination				
9	Significance of the mark for the final score 70%				
10	Representative module and full-time teachers Name of module coordinator at the offering institution				
11	Other Information

Distributed and Embedded Real time Systems					
Identification number MM21	Workload 180 h	Credits 6 ECTS 3 CH	Semester 2	Frequency of offer Spring Semester	Duration 1 Semester
1	Courses Course instruction: 2 HPW Exercise: 2 HPW		Contact time 4 HPW / 60 h	Self-study 120 h	Planned group size 20 students
2	<p><i>Course Description</i></p> <p>Mechatronics is the merger of mechanics, electronics and computer concepts (interfacing and programming). This course involves computer interfacing and programming to control mechanical objects. In this course we will use a microcontroller or a field programmable chip (computer-on-a-chip) to interface with Mechatronics components such as switches, LED's, DC motors, stepper motors, relays, remote controls, and others. It will also present Personal Computers Interface (PCI) through Data Acquisition Cards (DAQ).</p>				
3	<p><i>Learning outcomes) / competencies</i></p> <p>On completing the course, students will be able to have the following skills:</p> <ul style="list-style-type: none"> ▫ Knowledge and understanding <ul style="list-style-type: none"> A1-Tell the principles of microcontroller-based systems design A2- Mention the design requirements of embedded systems ▫ Intellectual skills <ul style="list-style-type: none"> B1. Show improved comprehensive quality and innovative ability B2. Design and implement a real system based on a single chip microcontroller ▫ Professional and practical skills <ul style="list-style-type: none"> C1. Implement small mechatronics system considering both H/W and S/W requirements for a single-chip design. C2. Work with system design development tools such as MATLAB, LABVIEW, PROTEUS or any other available software. ▫ General and transferrable skills <ul style="list-style-type: none"> D1. Use programmable chip to manage operation of a Mechatronic system D2. Choose suitable hardware and software components for a reliable system 				
4	<p>Contents</p> <p>Designing and developing computer-based system: analysis phase, design phase, and implementation phase, Design phase: choosing a processor, choosing OS, choosing programming language, choosing developing tools, Implementation phase: Buses, I/O devices, timer/counter, interrupts, data acquisition systems, data distribution systems, Microcontroller programming: C program elements; header & source files, preprocessor directives, macros & functions, data type & data structures, loop & pointers, queues & stacks, Embedded programming in C++, Motor control examples (closed and open-loops), PID example of mechatronic system, Serial and USB Communication: connecting to PC, internet, wireless sensor networks for mechatronics systems, Software engineering concepts in the system development process: algorithm complexity, s/w process life cycle, s/w analysis & design, s/w implementation, testing, validating & debugging, Realization of real-time algorithms, Hardware and Software co-design, Real-time programming: soft & hard tasks, RTOS, RTOS</p>				

	Task scheduling, Interrupt routines in RTOS, Case studies of programming with RTOS, Computer Interface through DAQ: Specifications and Interface, PC Control Programming through DAQ (LABVIEW or MATLAB)
5	Teaching Method Lectures, discussions, tutorials, problem solving, modeling, project, self study.
6	Requirements Bachelor degree (BSc, BEng) in Electrical Engineering, Mechanical Engineering, or Computer Science
7	Examination written examination
8	Requirements for awarding credit points Module examination
9	Significance of the mark for the final score 70 %

Advanced Measurement Systems and Sensors					
Identification number MM23	Workload 180 h	Credits 6 ECTS 3 CH	Semester 2	Frequency of offer Spring Semester	Duration 1 Semester
1	Courses Course instruction: 2 HPW Exercise: 2 HPW		Contact time 4 HPW / 60 h	Self-study 120 h	Planned group size 20 students
2	Course Description: The course is based on mechatronic philosophy, regarding mechanic, electronic and informatics as a whole. After finishing the course the student should be able to:- <ul style="list-style-type: none"> Analyze measurement- and control problems, Design and/or select the best suited sensors for a specified problem, regarding range, accuracy, dynamic behavior, environment requirements etc. Perform all necessary calculations regarding the sensor implementation and the analog and digital signal processing required. 				
3	Learning outcomes / competencies On completing the course, students will be able to have to following skills: <ul style="list-style-type: none"> Knowledge and understanding <ul style="list-style-type: none"> A1- Describe the concepts of different measurement & Mechatronics systems used in industry. A2 - Describe the function, suitability of different sensors and Transducers. A3- Know and understand in depth the concepts of Input/ Output Signal conditioning Intellectual skills <ul style="list-style-type: none"> B1-Analyze, Design and/or select the suitable sensors for a given system. B2-Analyze & design the signal conditioning circuits. B3 – Conduct research in measurement system and sensor field to generate novel techniques Professional and practical skills: <ul style="list-style-type: none"> C1- Carry out calibration and error estimation of measuring devices . C2- Design and assessment of the sensors used in industrial systems. C3 – Improve system performance General and transferrable skills <ul style="list-style-type: none"> D1- Critical thinking. D2- Team work D3- Self learning.. 				
4	Contents: Introduction- Mechatronics systems – Measurement systems- Performance terminology of sensors - Passive Sensors (Resistors-Capacity-Inductive); Active sensors: Piezoelectric sensors for force, pressure and vibration, electrodynamic sensors for speed and rotation, Photodiodes and Thermocouples. –Signal conditioning (Analog data processing-Digital data processing – Protection – Filtering)- Elements of optical sensors: LED, laser diode, photodiode, CCD sensor, optical waveguides, opto coupler: Optical sensor systems: Light barriers, triangulation, fiber-optic sensors, spectrometer; Lasers: Gauß beam, coherence, optical resonators, interaction of laser light with matter Smart sensors and smart sensor systems (Definition – Different types- new trends)- Sensors				

	selection- Small course project (groups of 3-4 students).
5	Teaching Method: Lectures, discussions, projects, tutorials and self-study.
6	Requirements Bachelor degree (BSc, BEng) in Engineering
7	Examination Written in-class exams; Take-home exams
8	Requirements for awarding credit points Module examination
9	Significance of the mark for the final score 70%
10	Representative module and full-time teachers <i>Name of module coordinator at offering institution</i>
11	Other Information <ul style="list-style-type: none"> Göpel, Hesse, Zemel: Sensors. Volumes 1, 4, 5, 7, VCH Verlag, Weinheim Löffler-Mang: Optical Sensors. Vieweg and Teubner, Wiesbaden Hecht, Zajac: Optics. Addison-Wesley Publishing Company

Research Methodology					
Identification number MM25	Workload 180 h	Credits 6 ECTS 3 CH	Semester 2	Frequency of offer Spring Semester	Duration 1 Semester
1	Courses Course instruction: 2 HPW Exercise: 2 HPW		Contact time 4 HPW / 60 h	Self-study 120 h	Planned group size 20 students
2	Course Description The main aim of this course is to teach the students how to write thesis/research proposals. Therefore, the course provides the students with an opportunity to engage in research activities such as literature reviews, research planning, data analysis and reporting (written and oral) using a chosen mechatronics engineering research topic.				
3	Learning outcomes) / competencies On completing the course, students will be able to have the following skills: <ul style="list-style-type: none"> Knowledge and understanding <ul style="list-style-type: none"> A1. Recognize the ethical principles of conducting applied research. A2. Identify various sources of information. A3. Identifying and formulating research problem. Intellectual skills <ul style="list-style-type: none"> B1. Carry out literature searches and some ability to critically evaluate literature. B2. Design and conduct experiments, devise appropriate measurements, analyse and interpret data and form reliable conclusions. Professional and practical skills <ul style="list-style-type: none"> C1. Undertake and manage a research project of significant size and scope. C2. Demonstrate awareness of the importance of documenting all aspects of the development of an engineering project. General and transferrable skills 				

	D1. Apply project management skills to research activities D2. Communicate effectively in written and oral ways.
4	Contents The course introduces students to some fundamentals of research methodology. This includes: Research ethics, engineering research methods, problem specifications, gathering and organizing relevant information, reading conference and journal papers, assessing retrieved information, analyzing and writing critical reviews, proposing and comparing different solutions, design of experiments, and technical writing. At the end of the course, students should write his/her research proposal that will be carried out in the semester to follow
5	Teaching Method Lectures, discussions, tutorials, and self study.
6	Requirements Undergraduate degree in engineering
7	Examination Research proposal: Report and presentation
8	Requirements for awarding credit points Module examination
9	Significance of the mark for the final score 70%
10	Representative module and full-time teachers <i>Name of module coordinator at offering institution</i>

Master Thesis						
Identification number MT4		Workload 900 h	Credits 30 (25+5) ECTS CH	Semester 4	Frequency of offer Spring semester	Duration One Semester
1	Courses Thesis Report Thesis Defense		Contact time 0 h		Self-study 900 h	Planned group size One Student
2	Course Description <p>This is a research-oriented work that builds on Thesis I: The candidate is required to extend his Thesis I work (that was carried at a partner institution) and continue at his original institution. The type of research extension will be setup by the department and agreed upon at the end of Thesis I. This extension might include further analysis of results, modified algorithms with new simulation runs, and/or laboratory/industry application of developed work.</p> <p>The candidate will present his Thesis work to an examination committee selected by the department. The presentation should explain the research work and analyze its results. The candidate will then go through an oral examination regarding his work.</p>					
3	Learning Outcomes On completing the course, students will be able to have to following skills: <ul style="list-style-type: none">▫ Knowledge and understanding A1. Understand detailed and advanced research concepts A2. Review and analyse related literature▫ Intellectual skills B1. Improve the students' research and innovative ability B2. Derive, design, and apply advanced concepts▫ Professional and practical skills C1. Write technical reports and research papers C2. Communicate effectively by presenting and defending ones work▫ General and transferrable skills D1. Transfer technology between institutions D2. Build teamwork for research work					
4	Contents Thesis topics will be based on: research directions of the institution and local industrial needs. The work will be deal with advanced mechatronics concepts					
5	Teaching Method Single or small groups					
6	Requirements Passing Thesis I					
7	Examination Master's Thesis Report Presentation and Oral Exam					
8	Requirements for awarding credit points Passing the module examinations Submitting research work for publication					

9	Significance of the mark for the final score
10	Representative module and full-time teachers
11	Other Information

Adaption Course Mechanical Engineering					
Identification number MM15-1	Workload 180 h	Credits 6 ECTS 3 CH	Semester 1	Frequency of offer Winter Semester	Duration 1 Semester
1	Courses Course instruction: 2 HPW Exercise: 2 HPW		Contact time 4 HPW / 60 h	Self-study 120 h	Planed group size 10 students
2	Course Description: The Adaption course Mechanical Engineering is a high level course mainly designed with consecration of applicants of non mechanical engineering specialization. After completion of this course the applicant should have the knowledge and skills that enable her/ him to understand and apply the basics of thermo fluid, fluid power engineering, and mechanical engineering design. The applicant will also appreciate its importance in Mechatronics systems.				
3	Learning outcomes) / competencies On completing the course, students will be able to have to following skills: <ul style="list-style-type: none"> ▫ Knowledge and understanding <ul style="list-style-type: none"> A1.Explain the fundamentals of: Thermodynamics, Fluid Mechanics, Fluid power, and Mechanical Engineering Design. A2. Interoperate the basic theories of Thermodynamics, Fluid Mechanics, Fluid power, and Mechanical Engineering Design.. ▫ Intellectual skills: <ul style="list-style-type: none"> B1 Design, and/or select the suitable mechanical components for Mechatronics systems. B2.Analyse and asses the performance of the Mechanical systems. B3. Design and/or select the fluid power circuits and components for Mechatronics systems. ▫ Professional and practical skills: <ul style="list-style-type: none"> C1. Apply the basic theories of Mechanical power and design engineering in solving engineering problems especially in Mechatronics. ▫ General and transferrable skills <ul style="list-style-type: none"> D1. Encourage the applicants for self learning in a discipline which may be different than their specialization. 				
4	Contents: (Parts of the following may be assigned as self-learning). Introduction to Fluid Mechanics -Measurement of pressure, thrust on submerged surfaces. Principles of Fluid Motion- Description of fluid flow; continuity equation - Introduction to Fluid Power - applications of fluid power, fluid power system components, types of fluid power control systems - Energy and power, source of power (pumps & compressors), Actuators and motors, valves and other control components, circuit design and analysis-Electrical control for fluid power systems. Introduction to Thermodynamics - Properties of matter, the state of matter, processes and cycles, open and closed thermodynamic systems.-Properties of Pure Substances: property tables, property diagrams, phase change, equations of state for ideal gas -Energy: Energy transfer by heat, work and mass- The First Law of Thermodynamics: Closed system, open system, steady-flow engineering devices. The Second Law of Thermodynamics: Statements of the 2nd Law, heat engines, refrigeration devices, reversible versus irreversible processes, the Carnot cycle. Introduction to Mechanical Engineering Design – Basics (Introduction- Material – Load &				

	stress analysis- Deflection & stiffness)- Failure prevention (Failure from static loading- Fatigue failure) – Design of some mechanical elements (selected items from: couplings- clutches – brakes – flywheels- Shafts – gears- screws – permanent fasteners).
5	Teaching Method Lectures, discussions, tutorials, projects, self study.
6	Requirements BSc. In Engineering or Computer.
7	Examination Written examination
8	Requirements for awarding credit points Module examination
9	Significance of the mark for the final score 70%
10	Representative module and full-time teachers Name of module coordinator at the offering institution

Advanced image processing					
Identification number MM15-4	Workload 180 h	Credits 6 ECTS 3 CH	Semester 1	Frequency of offer Winter Semester	Duration 1 Semester
1	Courses Course instruction: 2 HPW Exercise: 2 HPW		Contact time 4 HPW / 60 h	Self-study 120 h	Planed group size 10 students
2	<p><i>Course Description:</i></p> <p>Digital image processing has various applications ranging from remote sensing and entertainment to medical applications. This course explores a few major areas of digital image processing at an advanced level, with primary emphasis on medical applications. Topics covered include image filtering and enhancement, visualization, image segmentation and image registration. For image registration, in addition to classical techniques that are based on image feature or intensity, a newly emerging technique based on the biomechanics of tissue deformation will be also covered. Examples will be presented to give the students exposure to real-world applications in medicine and other applications.</p>				
3	<p><i>Learning outcomes) / competencies</i></p> <p>On completing the course, students will be able to have to following skills:</p> <ul style="list-style-type: none"> ▫ Knowledge and understanding <ul style="list-style-type: none"> A1- The ability to convert art image to digital coding. A2-Practical experience implementing and using the presented image processing algorithms. ▫ Intellectual skills: <ul style="list-style-type: none"> B1- Deduce and/or select the suitable mathematical models for converting art image. B2- Analyze the color degree and convert it to a coding number. ▫ Professional and practical skills: <ul style="list-style-type: none"> C1. Expose the students to some of the state of the art image processing techniques and their applications especially medical applications as listed in the course content. C2. Provide the students with practical experience implementing and using the presented image processing algorithms. C3. Present novel alternate ways of solving research problems with medical image registration components ▫ General and transferrable skills <ul style="list-style-type: none"> D1- Team work D2- Self learning

1	Courses Course instruction: 2 HPW Exercise: 2 HPW		Contact time 4 HPW / 60 h	Self-study 120 h	Planed group size 20 students
2	<p><i>Course Description:</i></p> <p>The objective of this course is to introduce you to the concepts, issues, and themes related to business planning, strategy, and entrepreneurship. The course will provide an overview of the functional activities in a typical business venture, such as organizational behaviour, human resources, finance, marketing, and operations. It will explore the business planning and strategic management issues of technology-driven enterprises in the early stages of development. Business analysis and planning skills are developed in this course.</p>				
3	<p><i>Learning outcomes) / competencies</i></p> <p>On completing the course, students will be able to have to following skills:</p> <ul style="list-style-type: none"> ▫ Knowledge and understanding A1. Know and understand the concepts, issues, and themes related to business planning, strategy, and entrepreneurship ▫ Intellectual skills: ▫ Professional and practical skills: C1. Develop a business strategy for a technology-based idea C2. Business analysis and planning skills ▫ General and transferrable skills D1. Communicate and work in a team 				
4	<p>Contents: (Parts of the following may be assigned as self-learning).</p> <p>Introduction Identifying Valuable Opportunities Selecting The Right Industry Conducting A Business Feasibility Analysis Managing Technological Transitions Creating An Effective Business Model Financial Viability Understanding The Market Understanding Customer Adoption Creating An Effective Team Sources Of Financing And Funding Ethics And Managing Intellectual Property</p>				
5	<p>Teaching Method Lectures, discussions, tutorials, problem solving, modeling, project, lab training, self study</p>				
6	<p>Requirements Bachelor degree (BSc, BEng) in Electrical Engineering, Mechanical Engineering, or Computer Science</p>				
7	<p>Examination</p>

Mechatronics-Oriented Engineering Project					
Identification number MM24-1	Workload 180 h	Credits 6 ECTS 3 CH	Semester 2	Frequency of offer Spring semester	Duration 1 Semester
1	Courses Course instruction: 2 HPW Exercise: 2 HPW		Contact time 4 HPW / 60 h	Self-study 120 h	Planned group size 20 students
2	<p><i>Course Description</i></p> <p>The "Mechatronics-oriented Engineering Project" is a project based course in which a team of two or three students work together to design and implement a Mechatronics project. After completion of this course the student should have the knowledge and skills that enable her/ him to design an intelligent Mechatronics System in addition to implement a small prototype. The intelligence ranges from pre-programmed tasks to decision taking. The overall aims of the course are to:</p> <ol style="list-style-type: none"> Deepen the fundamentals of Mechatronics system design and implementation with emphasis on: multidisciplinary, Integration and Synergism. Build the ability of time planning for performing specific task during a specified time period. Encourage the students to work and communicate inside a team (Team work project) 				
3	<p><i>Learning outcomes / competencies</i></p> <p>On completing the course, students will be able to have to following skills:</p> <ul style="list-style-type: none"> ▫ Knowledge and understanding: <p>On successful completion of the course, the student should demonstrate knowledge and understanding of:</p> <p>A1- Advanced principles of design of Mechatronics Systems including elements design (Mechanical parts, Sensors, Control unit, Signal conditioning, and actuators), the process and the whole system.</p> <p>A2- The modern engineering technologies in the areas of: sensors, control, and actuators.</p> <p>A3- The basics of modeling, identification, and simulation of Mechatronics systems.</p> <p>A4- The design cycle based on recognition of needs and market feedback loop for sustainable</p> ▫ Intellectual skills: <p>On successful completion of the course, the student should be able to.:</p> <p>B1- Deduce and/or select the suitable mathematical models for Mechatronics systems including mechanical, fluid, thermal and electrical systems.</p> <p>B2- Analyze the performance of Mechatronics systems and suggest the engineering solutions for improvements to achieve given goals.</p> <p>B3- Judge engineering decisions considering balanced costs, benefits, safety, quality, reliability, and environmental impact.</p> <p>B4- Select the optimum components using internet search and other means considering availability, and the tradeoff between quality and cost.</p> <p>B5- Identify, at an appropriate level, the design, production, interfacing and software needs of different parts of Mechatronics systems - Sensors, actuators, different types of control units (Simple logic circuits, microcontrollers, and PLC's) and the suitable signal conditioning</p> 				

	<p>□ Professional and practical skills: On successful completion of the course, the student should be able to:</p> <p>C1- Apply the principles of sustainable design and development for building up real simple Mechatronics systems with the integration of electronics and control systems.</p> <p>C2- Utilize practical systems approach to design and performance evaluation of a simple Mechatronics system.</p> <p>C3 Use computer software such as MATLAB, SIMULINK ,Broutus, Solidworks, or other available reputable programs to design, and/or simulate Mechatronics systems and their components.</p> <p>C4- Apply the essential safety rules of using electronics, electrical, and mechanical components..</p> <p>C5- Demonstrate basic organizational and project management skills during planning, designing, making and finishing phases of the course project.</p> <p>□ General and transferrable skills On successful completion of the course, the student should be able to:</p> <p>D1- Collaborate effectively with others and work in a team trough group assignments and project work.</p> <p>D2- Communicate effectively through assignments, reports, exams (written & Oral).</p> <p>D3- Lead and motivate individuals through project work.</p> <p>D4- Effectively manages tasks, time, and resources trough assignments and project work.</p> <p>D5- Search for information in library and Internet and engage in life-long self learning discipline through assignment and project.</p> <p>D6- Refer to relevant literatures when writing proposal, and the final report of the project.</p>
4	<p>Contents Each two or three applicants choose a project (Preferably related to industry). They should prepare and deliver a proposal no later than the end of the second week. The proposal should contain a Title page, abstract, general lay out, parts list with approximate price, and a time plane. The chosen project must represent a Mechatronics system controlled with a microcontroller, PLC, or a PC.</p> <p>By the end of the semester, the following are to be delivered: Final report, 15 minutes power point presentation, hardware reliable working model and simulation using MATLAB, Lab View, or any other available reputable software.</p> <p>The following topics may be covered through direct lectures and/or self learning: Project planning & management – Mechatronics systems- Selection of sensors & actuators- Control units – Signal conditioning – Simulation of Mechatronics systems.</p>
5	<p>Teaching Method Lectures, tutorials, lab follow-up, problem solving, modeling, and self-studies.</p>
6	<p>Requirements Bachelor degree (BSc, BEng) in Engineering</p>
7	<p>Examination Project implementation, Final report, Presentation and discussion</p>
8	<p>Requirements for awarding credit points Module examination</p>

Advanced PLC					
Identification number MM24-4	Workload 180 h	Credits ECTS 2 CH	Semester 2	Frequency of offer Summer semester	Duration 1 Semester
1	Courses Course instruction: 2 HPW Exercise: 2 HPW		Contact time 4 HPW / 60 h	Self-study 120 h	Planed group size 20 students
2	Course Description This course is designed to provide an in depth understanding of the PLC Networking, Analog systems, advanced instruction set features, communications, diagnostics, modem and internet connections, remote I/O, Ethernet, motion control. Formal methods are introduced during this course to encourage the students to design a control algorithm. Formal methods are also important to verify and validate the control algorithm before implementing it. Distributed control and automation (DCS) according to IEC 61499.				
3	Learning outcomes / competencies On completing the course, students will be able to have the following skills: <ul style="list-style-type: none"> ▫ Knowledge and understanding <ul style="list-style-type: none"> A1. Understand formal methods and their use in designing a PLC programs. A2. Understand new technologies related to PLCs, such as motion control, Ethernet and Internet Communication, and DCS. ▫ Intellectual skills <ul style="list-style-type: none"> B1. Formulate strategies for solutions to advanced engineering problems based on the formal methods taught. B2. Choose appropriate tools and PLC algorithms to implement a control system. ▫ Professional and practical skills <ul style="list-style-type: none"> C1. Apply advanced PLC methods in engineering problems. C2. Enable the students to create and formalize complex problems through the use of formal methods. ▫ General and transferrable skills <ul style="list-style-type: none"> D1. Get hand-on experience in PLCs to build control algorithms. D2. Communicate solutions adequately 				
4	Contents Analytical Methods: Logic Control, Formal Methods, Verification and Validation, Ethernet, Remote I/O, DCS. Practical Methods: The use of formal methods to verify, design, and implement control systems. Introducing Internet and Ethernet communication, Remote I/O. An introduction to DCS using IEC 61499 is introduced.				
5	Teaching Method Lectures, tutorials, problem solving, modeling, self-studies.				
6	Requirements Bachelor degree (BSc, BEng) in Electrical Engineering, Mechanical Engineering or Computer Science

Advanced Manufacturing Systems					
Identification number MM24-5	Workload 180 h	Credits 6 ECTS 3 CH	Semester	Frequency of offer	Duration One Semester
1	Courses Course instruction: 2 hpw Exercise: 2 hpw		Contact time 4 hpw / 60 h	Self-study 120 h	Planned group size 20 students
2	Course Description The aim of this course is to develop the students' knowledge in production systems. This course is designed to provide in-depth understanding of the automation in design and manufacturing process within the production system. This includes: Computer Integrated manufacturing (CIM), Computer Aided Design (CAD), product modeling, design paradigms, Computer Aided Engineering (CAE), virtual prototyping, performance analysis, Finite Element Analysis (FEA), structure analysis, Computer Aided Manufacturing (CAM), Computer Numerical Control (CNC), and Flexible Manufacturing System (FMS).				
3	Learning outcomes) / competencies On completing the course, students will acquire following skills: <ul style="list-style-type: none"> ▫ Knowledge and understanding <ul style="list-style-type: none"> A1. Understand the different production system types, components, and operations, automation in production system, CIM, CAD, CAE, and CAM. A2. Comprehend the production design, analysis, and manufacturing steps. ▫ Intellectual skills <ul style="list-style-type: none"> B1 Apply the CAM technology to support the manufacturing simulation, process planning, rapid prototyping, CNC machining, and manufacturing cost estimation. B2. Develop computer-based model to represent, simulate, test, and evaluate the product design ▫ Professional and practical skills <ul style="list-style-type: none"> C1. Design and analyze products using CAD software. C2. Implement advanced CNC programming. ▫ General and transferrable skills <ul style="list-style-type: none"> D1. Develop advanced manufacturing systems, namely, FMS, Intelligent manufacturing system (IMS), and Next Generation Manufacturing (NGM). 				
4	Contents Automation in production systems (CAD/CAE/CAM, CIM); Product design modeling (parametric modeling, mechanical assembly, assembly sequence and analysis, design parameterization, product data management); The e-Design (The e-Design paradigm, Virtual prototyping, product performance analysis, product virtual manufacturing, Physical prototyping); Structure analysis (Analytical methods, Finite element methods and modeling; Finite Element Analysis (FEA) software, case studies); Motion analysis (analytical methods, computer aided methods, motion simulation, case studies); Fatigue, fracture, and reliability analysis (The stress life approach, dynamic stress calculation and cumulative damage, reliability analysis methods), Product				

	manufacturing and cost estimation, Advanced Machining Processes and calculations (Milling, turning, drilling, broaching...), Introduction to Computer numerical control CNC (construction, motion control analysis, G-code programming), Advance CNC programming using CAD/CAE (Pro/Engineer software), Advanced Manufacturing Systems (FMS, IMS, and NGM).
5	Teaching Method Lectures, presentations, and projects
6	Requirements Control, Advanced Engineering Mathematics, and Programming
7	Examination Written examination Homework Design and manufacturing Project
8	Requirements for awarding credit points Module examination
9	Significance of the mark for the final score 70%
10	Representative module and full-time teachers

Advanced Digital Signal Processing					
Identification number	Workload	Credits	Semester	Frequency of offer	Duration
MM15-5	180 h	6 ECTS 3 CH	1	Winter semester	1 semester
1	Courses Course instruction: 2 HPW Exercise: 2 HPW		Contact time 4 HPW / 60 h	Self-study 120 h	Planned group size 20 students
2	Course Description: Digital filter design requirements and methodologies. Finite Impulse Response (FIR) filters design using windowing and frequency sampling method. IIR filter design using poles and zeroes placement method. The concept of adaptive linear filters; optimal (Wiener filter), normal equation, Least Squares (LS) solution, Least Mean Squares (LMS) solution, Recursive Least Mean Squares (RLMS) solution. Introduction to multi-rate digital signal processing: sub-sampling, and up-sampling by an integer factor for baseband and band-pass signals, sampling rate changes by a rational factor. Multi-stage approach to sampling rate conversion. Structures of FIR decimators and interpolators, multi-rate filter banks, quadrature mirror filter (QMF) bank design.				
3	Learning outcomes) / competencies On completing the course, students will acquire following skills: <ul style="list-style-type: none"> □ Knowledge and understanding <ul style="list-style-type: none"> A1. digital filter design procedures and analysis methods; A2. design choices of Finite Impulse Response (FIR) and Infinite Impulse Response (IIR) type digital filters; A3. design and analysis of optimal (in LS sense) digital filters; A4. design and analysis of adaptive Least Mean Squares (LMS) filters A5. design and analysis of adaptive Recursive Least Square (RLS) filters □ Intellectual skills □ Professional and practical skills <ul style="list-style-type: none"> C1. design finite impulse response (FIR) systems using windowing and frequency sampling methods; C2. design infinite impulse response (IIR) systems using Pole zero placement, Impulse invariant and bi-linear z-transform methods; C3. analyse and use optimal (LS) filters based on the Wiener equation; C4. analyse and use adaptive filters based on the Wiener-Hopf equation; C5. analyse and design adaptive least mean square (LMS) filters; C6. analyse and design adaptive recursive least square (RLS) filters C7. re-sample a digital signal; □ General and transferrable skills <ul style="list-style-type: none"> D1. project writing, communication, presentation, numerical skills and analytical problem solving;
